

Star Fasteners Workshop Services

Our fully equipped workshop and experienced team offer a reliable and timely service.

Repair:

We make sure that there's minimal down time and a quick turnaround for every job we do.

To ensure a timely service, Star Fasteners carry a comprehensive range of spares in house. We always use genuine components for all tool repairs and maintain a large stock of spare parts from leading manufacturers such as Huck®, FAR® and VVG®. The process is simple. We can arrange to pick the tool up either by our van or by courier. A quote detailing all parts and costs is raised. If required, we can guide you through a process to make a decision and the most economical outcome. Each tool is given a unique reference so we can view its full maintenance history.

Service and maintenance:

Every production environment, workshop and tool benefits from a regular maintenance program. This helps to: -

- Ensure that fasteners are being installed properly
- Satisfy your health and safety obligations
- Keep production moving and makes sure that the tools are operating correctly

If the tools are brought back into our workshop, a typical tool service will involve a complete strip down, de-greasing and cleaning of all parts with our specialist hot-parts washer. Once assessed, if necessary, we will replace seals and worn parts. Finally, the tool is re-primed, re-set as required and thoroughly tested.

Servicing can be arranged to fit in with shutdowns or down time to suit factory schedules.

Hire and Service Hire:

Should your workshop suddenly become busy, or a specialist tool is needed for a specific contract, Star Fasteners can offer short or long-term hire tools.

We also offer service hire whilst a tool is in our workshop for service of repair.

Sales:

We offer quality tools that we know can stand up to the rigours of a busy workshop environment. Our service includes demonstrating the latest models and advising on tool options best suited to both the application and the environment.

Star Fasteners is committed to continuously improve and expand our tooling product portfolio to ensure that we remain at the forefront of modern assembly requirements. As the UK's largest Huck® fastener distributor, Star Fasteners has become synonymous with the constant quest for innovation.

We offer factory visits to tailor a tooling package that can address issues such as noise reduction and trip hazards. When standard solutions do not fit, we work together to find a resolve.

Training:

An expert member of our team can either provide on-site training in your own work place or you can visit our purpose-built workshop. Bespoke solutions are available.

Our team are experienced in working in production environments and understand the complications that tool downtime brings.

We can take the training back to basics. From checking optimum air pressures, to knowing what to look for when inspecting equipment, this knowledge then leads onto detecting and correcting potential problems ideally before they occur. Major downtime is then avoided.

Spares:

We hold extensive stocks of tooling spares for current Huck, FAR and VVG tools and many obsolete models too.

For those who prefer to carry out their own servicing and repairs, we can generally offer next day delivery. As part of our service, we can talk you through some simple preventative maintenance measures to get the most out of your tool and ensure minimal downtime.

If you would like to speak to somebody
By partnering with Star Fasteners we can solve fastener installation issues, boost production output and therefore profitability.

For more information on any of our tool services please call us on 0115 9324939 and we will be pleased to discuss your requirements.

Alternatively email tooling@starfasteners.co.uk
We are confident that our fast and reliable repair service will meet your requirements.
